FYI --

I Just proposed this text in response to Pueblo Chieftain questions about the Nelson Tunnel Site. See below

I am not comfortable answering questions about the settlement, as an FYI- if reporters do their homework a little, they would understand that the case is resolved as soon as the 30 day comment period ends, it seems that they picked up only on the complaint, and did not see that the settlement (CD) was lodged at the same time. The question seems leading to me.

Lisa --

Please see below for responses to the Pueblo Chieftain Questions -- let me know you need more info.

1) Will EPA wait to issue a Feasibility Study on remedies for the tunnel until after the agency's lawsuit against Coca Mine has been resolved?

EPA response:

The Feasibility Study is a process to identify and evaluate remedy options. The Feasibility Study is being conducted by the EPA. During this process, EPA identified additional data needs necessary to more fully evaluate possible source control technologies. The additional information gained will be incorporated into the evaluation of remedy options and presented in the Feasibility Study.

2) Does the agency still hope to consider a remedy option that involves the dewatering of the mine pool by Rio Grande Silver, should they ever move into silver mining operations?

EPA response:

All feasible remedy options are being considered at this time.

Subject: Nelson Tunnel remedy

Hi Rich,

It's been a little over a year since we spoke. My name is Matt Hildner and I cover the Creede area and the San Luis Valley for the Pueblo Chieftain. Have a couple questions below about the Nelson Tunnel remedy process. If it's more convenient to give me a call, you can reach me at 719-580-6896. Otherwise an email response is fine. If I could get a response by 4 pm, I'd appreciate it. Thanks.-- Matt
